1. The following is an examiner's statement of reasons for allowance: Prior art does not disclose motor drive method with steps of determining position signal corresponding to position of a rotor of motor, selecting one switching element of one of plurality of output circuits according to position signal and turning on the selected switching element for a time period corresponding to a predetermined electrical angle and repeatedly switching lower side switching elements of a plurality of output circuits among the remaining ones of plurality of output circuits when selected switching element is an upper side switching element, while repeatedly switching upper side switching elements of a plurality of output circuits among the remaining ones of the plurality of output circuits when selected switching element is a lower side switching element, wherein the switching step the switching operation is controlled according to an input torque command signal and a voltage generated at the current detection resistance so that each of a plurality of periods obtained by dividing the time period corresponding to the predetermined electrical angle includes a first period in which one of the switching elements to be switched is turned on and second period in which another one of the switching elements is turned on.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
